

Mindtouch Deki Wiki

Steve Romanow

- Overview of features
- History
- Extension Example

IMHO

- Coolest wiki I have used yet
- Undecided stance on mono debate
- Built on open source stack, free community version
- As is becoming standard, some features held back for paying customers

History

- Fork of MediaWiki
- Rewritten in C#

Tools and other integration

- Runs on LAMP with Mono.
- Dream - MindTouch Dream is a .NET REST framework for developing lightweight, highly decoupled web-services. It runs on Microsoft .NET 2.0 and Novell Mono 1.2.
- Several hosting options: Vmware, CoLo, Hosted (<http://wik.is>)

Compelling Features

- WYSIWYG Editing (FCKeditor)
- Indexing of wiki content AND attachments (Apache Lucene)
- Hierarchical Navigation and Breadcrumbs
- Fine Grained Access Control
 - Search engine obeys access restrictions, you will not get search hits for content you cannot access.
